

MANUAL UPFLOW NEUTRALIZER

For the neutralization of acidic water.

The Nature Soft Upflow Neutralizer provides a simple, easy to install system for neutralizing acid water by raising the PH of the water. By passing the water through the filter in an upflow direction, the media is kept from ‘cementing’ and provides for good contact with the water.

MEDIA:

Calcite is a naturally occurring calcium carbonate media used when PH is between 6 and 7. This is a sacrificial media and must be replenished periodically.

GENERAL NATURE SOFT SPECIFICATIONS
1 CU FT 10x40 Tank
Available with 3/4" distributor cap
